Circuit breaker

Switch disconnecter

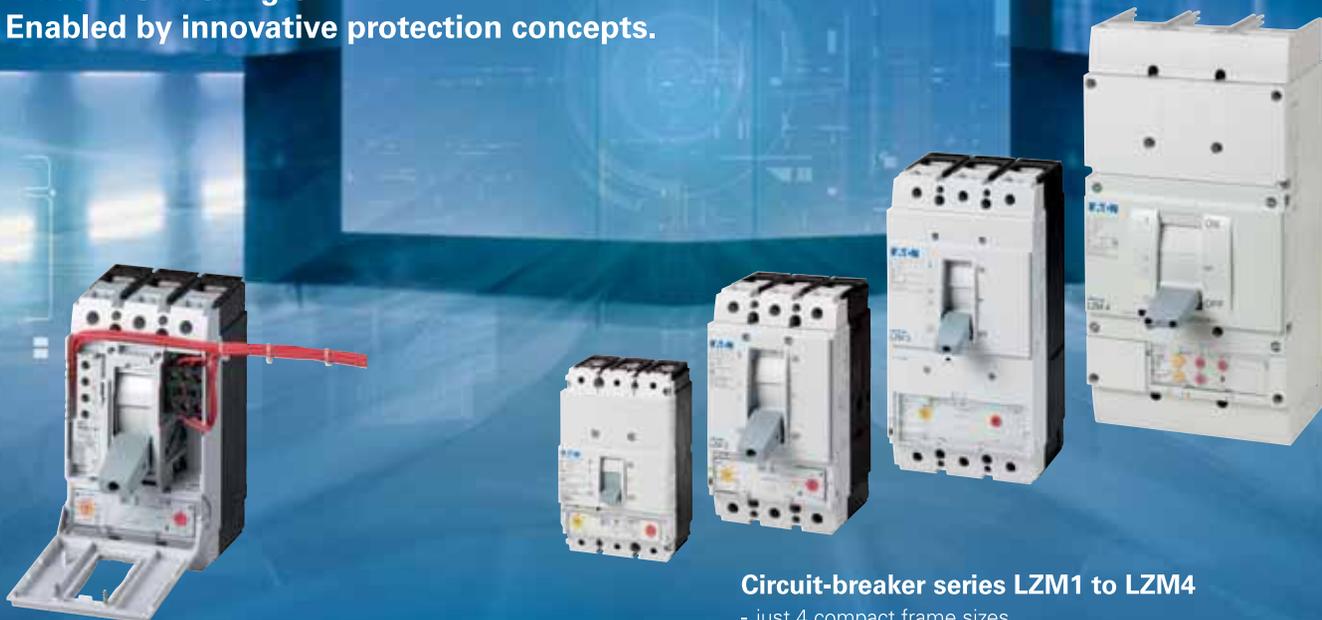

Switching and protection up to 1000A

EATON

Powering Business Worldwide

Circuit breaker LZM series up to 1000A

Reliable, safe and simple products for energy distribution systems in high density residential, commercial and industrial buildings. Enabled by innovative protection concepts.

Standard/trip-indicating auxiliary contact from the Titan range

- reduced number of variants and stockholding requirement
- simple front installation at the same position
- simple clip-on feature saves mounting costs
- attractively priced identical parts from the control circuit device range

Page 26

Circuit-breaker series LZM1 to LZM4

- just 4 compact frame sizes
- available as 3 and 4-pole device up to 1000A
- equal dimension as NZM range
- flexible mounting using modular function groups
- suitable for 50°C according derating table
- switch suitable for world-wide use

Page 4

Remote operators

- common functional concept of all variants
- low closing delays 60 ms to 100 ms
- locking and sealing features provide security

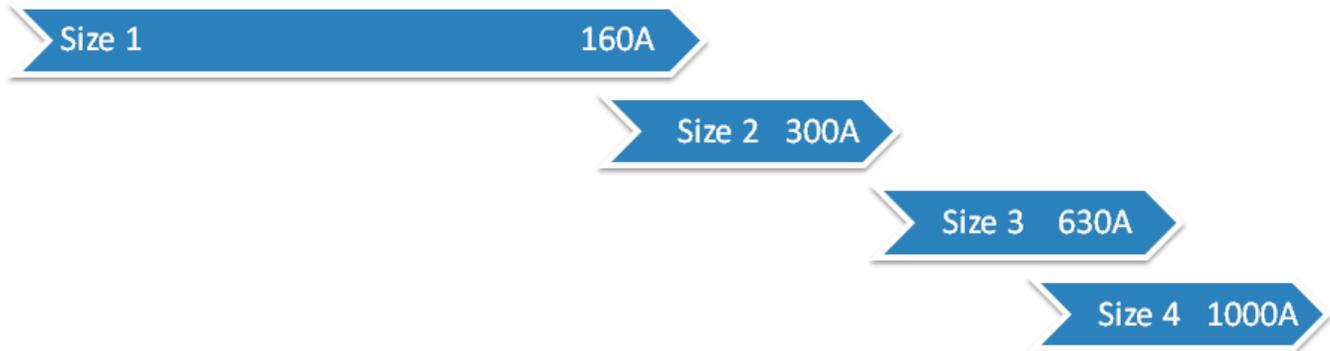

Page 35

Door coupling rotary handles

- identical drilling template for all variants
- innovative automatic centring
- axis support for long-term reliable operation

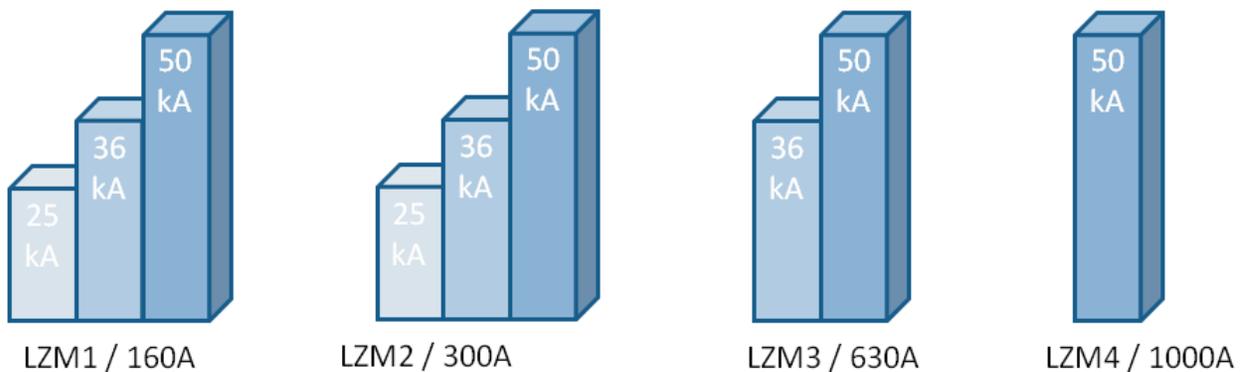

Page 30

Rated Current (A)

Only 4 frame sizes with nominal current up to 1000 A reduce time and effort to design and build up energy distribution boards.

Rated ultimate short-circuit breaking capacity (kA at 400/415V)

Continuous short-circuit breaking capacity from frame 1 up to frame 4 to ensure easy project planning for application oriented projects.

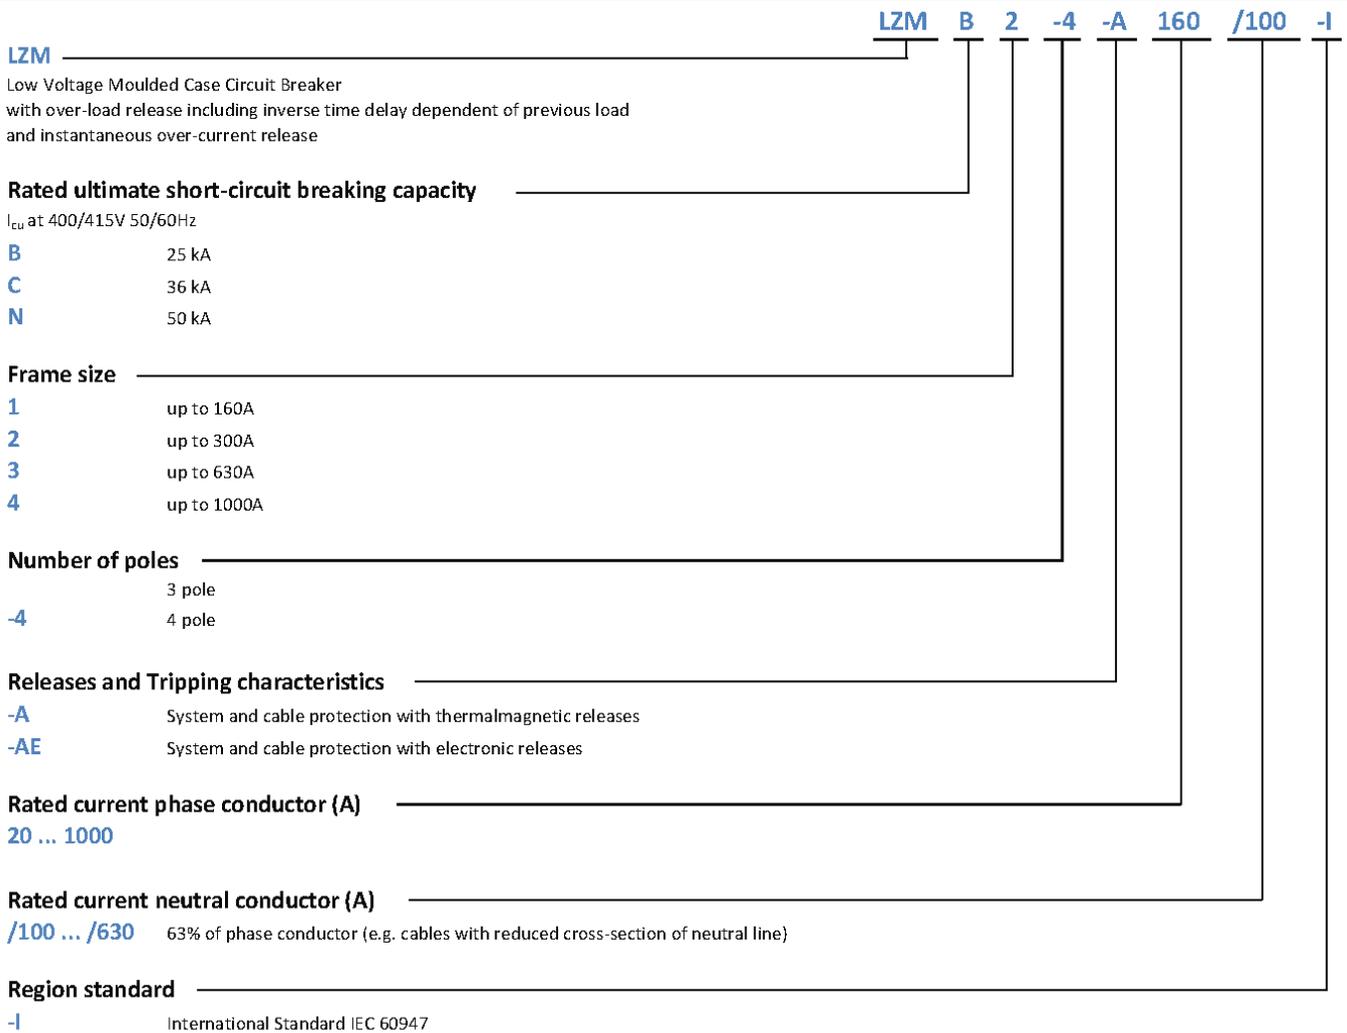

Complete offer to cover basic requirements and standard applications up to complex high end energy distribution boards.

Thermomagnetic and electronic trip unit

	Type code	Overload release	Short circuit release	
Thermo-magnetic	A	0.8 ... 1 x I _n	6 ... 10 x I _n	Standard application cable and system protection
Electronic	AE	0.5 ... 1 x I _n	2 ... 12 x I _n	Standard application cable and system protection

With each release type the LZM range provides adjustability for every nominal current to protect your application accordingly.

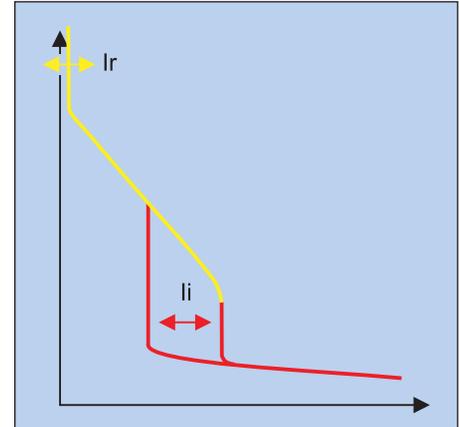

Type code for LZM-I MCCBs

The description of the type code is a logic sequence of short circuit level, frame size, number of poles, trip unit and nominal current.

Over-current releases

Thermomagnetic release A

1 Overload protection

$I_r = 0,8 - 1 \times I_n$

Neutral protection

The neutral pole is protected by the thermal device featuring an I_{rn} tripping threshold of 100% or 60% of the I_r threshold adjusted with respect to the phases.

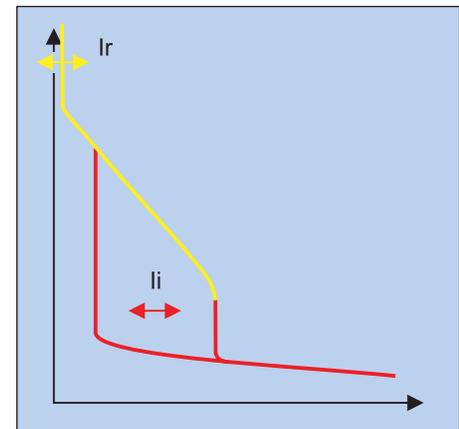

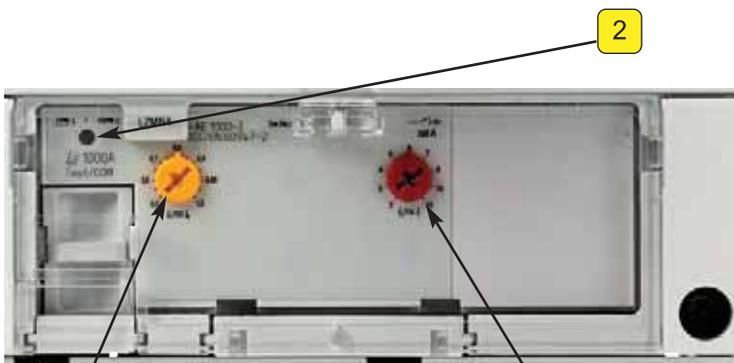

In this way, conductors, which may have a smaller section on the less charged neutral pole as in the phases, may be dimensioned effectively.

2 Short-circuit protection

Device with instantaneous tripping and adjustable I_i threshold

$I_i = 6 - 10 \times I_n$

Electronic release without delay AE

1 Overload protection

Device featuring microprocessor with inverse time tripping and adjustable threshold

$I_r = 0,5 - 1 \times I_n$

Neutral protection

The neutral pole is protected by the thermal device featuring an I_{rn} tripping threshold of 100% or 60% of the I_r threshold adjusted with respect to the phases.

The protection featuring advance threshold is intended for high I_n rated currents ($\geq 160A$): in these cases, the statutory provision allows the use of cables with a smaller section than in the phases.

2 Led for indication of overload

The LED starts to light when the charge value approaches the I_n value or exceeds it:

Charge	$< 70\% I_r$	$\geq 70\% I_r$	$\geq 100\% I_r$
LED	off	steady	on intermittent

3 Short-circuit protection

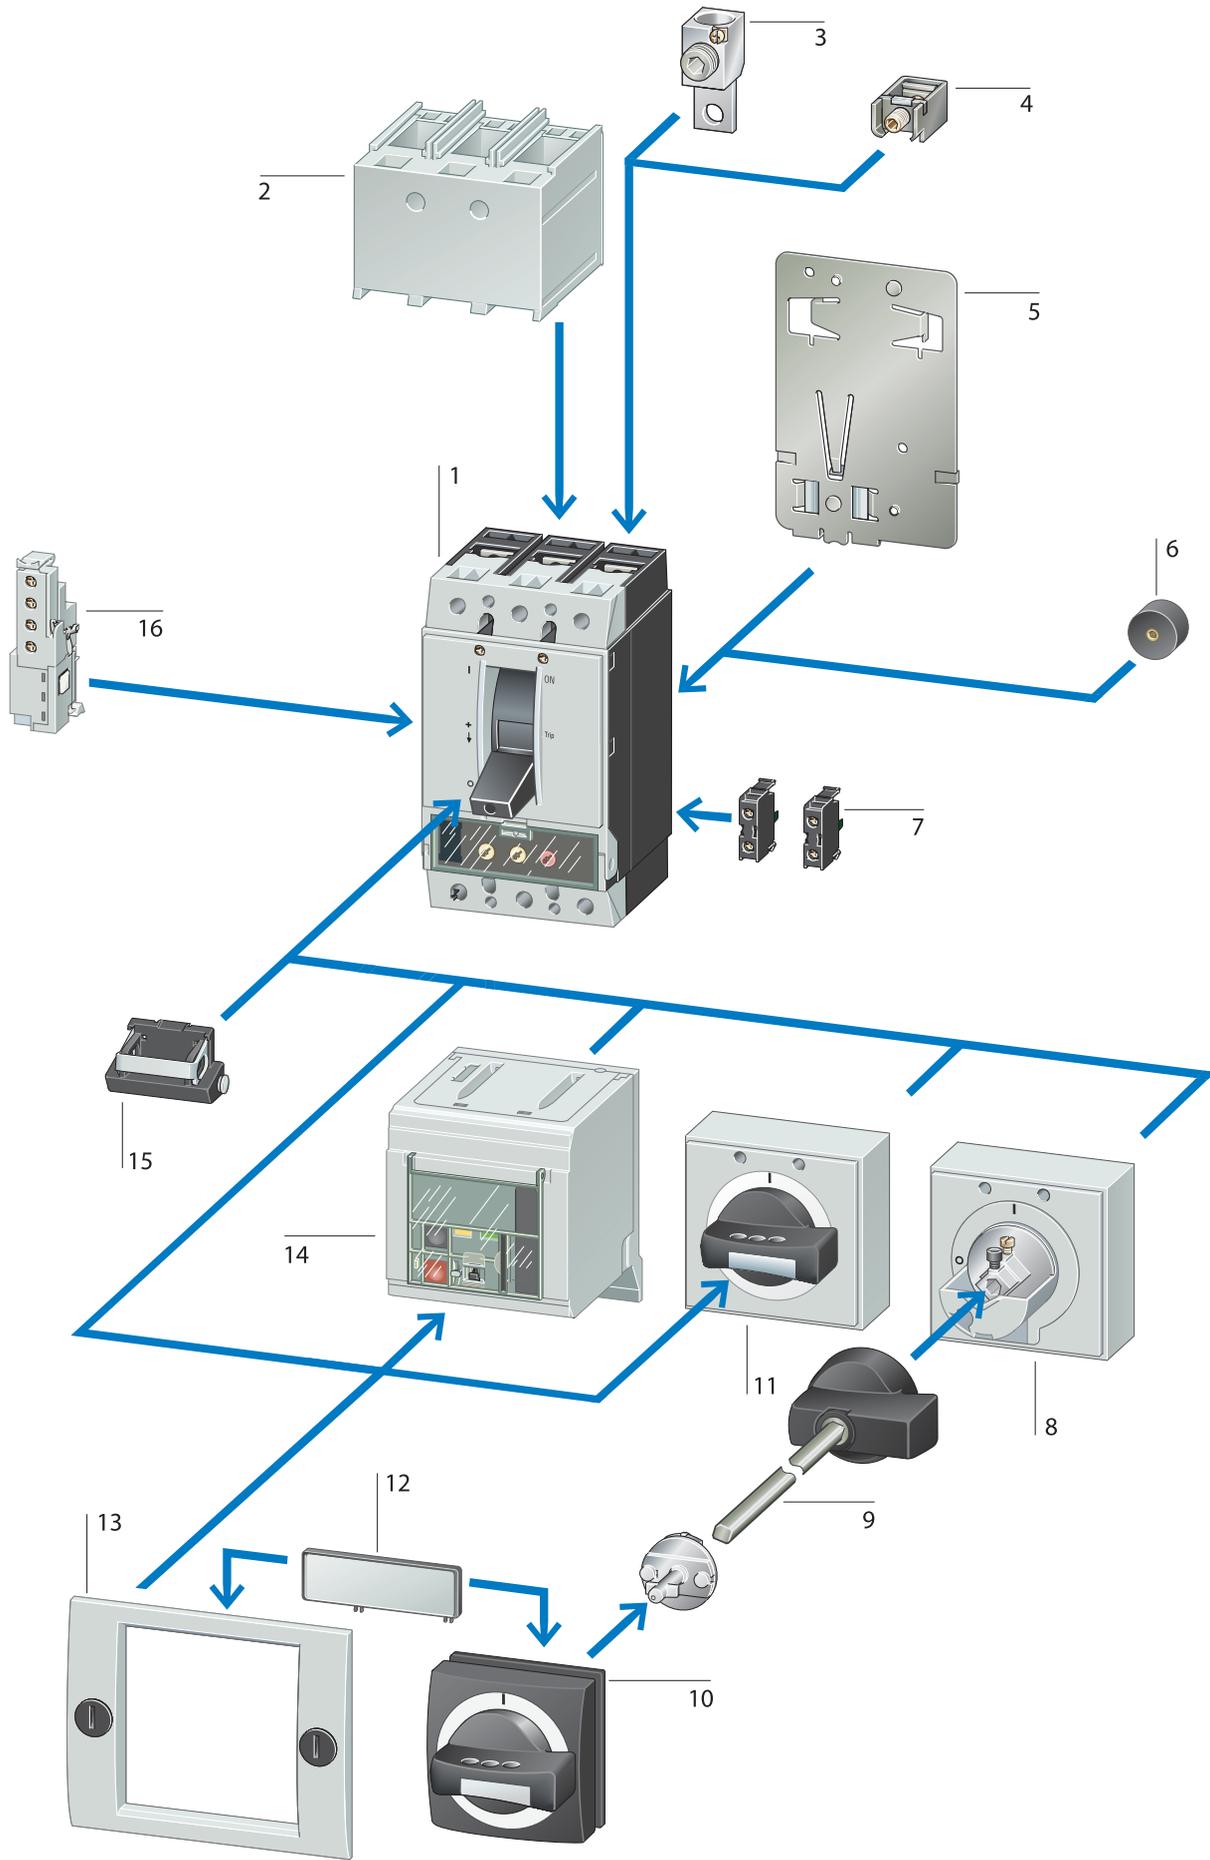

Device featuring instantaneous tripping and adjustable I_i threshold

$I_i = 2 - 8/12 \times I_n$

**Circuit-breakers, switch-disconnectors
from 15 to 1000 A**

xEnergy

Basic units

Circuit-breaker	1
Rated uninterrupted current up to 1000 A	
Switching capacity 25, 36, 50kA at 415V	
Adjustable releases for overload and short-circuit	
Protection of systems, cables, motors, generators	
3 and 4 pole versions, IEC/EN60947	
→ page 6	
Switch-disconnector	1
Rated uninterrupted current up to 1000 A	
Remotely tripped switch-disconnector with undervoltage or shunt release	
3 and 4 pole versions, IEC/EN60947	
→ page 12	

Add-on functions

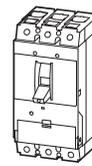

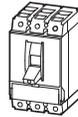

Standard auxiliary contact (HIN)	7
Switching with the main contacts. Used for indication and interlock functions.	
→ page 26	
Trip-indicating auxiliary contact (HIA)	7
General trip indication '+', when tripped by voltage release, overload release or short-circuit release	
→ page 26	
Voltage release	16
Undervoltage release	
Shunt release	
→ page 28	
Door coupling rotary handle	8+10
Lockable	
With door interlock	
→ page 30	
Extension shaft	9
Can be cut to required length.	
→ page 30	
Rotary handle	11
Lockable	
→ page 31	
Remote operator	14
For remote switching of circuit-breakers and switch-disconnectors	
→ page 35	
Toggle lever interlock device	15
→ page 33	

Mounting accessories

Tunnel terminals for Al and Cu cable	3
Standard with control circuit terminal	
LZM1 → page 14	
LZM2 → page 16	
LZM3 → page 18	
LZM4 → page 22	
Box terminals	4
Standard version of frame size 1 assembled within the circuit-breaker enclosure

T: full selectivity

Protection of PVC insulated cables against thermal overload with short-circuits

According to VDE 0100 part 430 cables and conductors must be protected against short-circuit and overload. The overload protection is obtained by using LZM circuit-breakers with settable, current-dependent, delayed overload release.

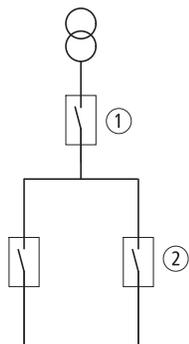

Short-circuit protection is provided by adjustable instantaneous releases, which open the main contacts in less than 25ms. The short-circuit total opening time restricts the temperature rise of the cable to a minimum.

The tables indicate the minimum conductor cross-section reliably protected by circuit-breakers during a short-circuit. (Operating voltage $U_N=415V$)

	Min. protected cross-section mm ² copper
LZM...1(-4)-...20	6

Where the prospective fault current at the point of installation of circuit-breakers is very high, it is conventional to use LZMN current-limiting circuit-breakers. An attractively priced alternative is to fit a LZMN current-limiting circuit-breaker upstream of LZMB(C) standard circuit-breakers, if the fault level is too high for LZMB(C) switches.

The table shows which current-limiting circuit-breaker LZMN in combination with LZMB(C) are to be used to provide protection at the network locations with high short-circuit capacities.

The selectivity limit is determined by the response current of the non-delayed short-circuit release in the upstream incoming circuit-breaker. In many applications this is sufficient.

xEnergy

Device Type	Release Type	Response values of the overload release at temperatures deviating from the reference temperatures						
		Temperature compensation coefficient						
		20 °C	30 °C	40 °C	50 °C	60 °C	65 °C	70 °C
Thermomagnetic release (TM)								
System protection		Protection of systems (reference temperature 40 °C)						
LZM...1(-4)-A15...80	TM	1.14	1.07	1	0.93	0.86	0.83	0.79
LZM...1(-4)-A90...125	TM	1.14	1.07	1	0.93	0.86	0.83	0.79
LZM...1(-4)-A160	TM	1.08	1.04	1	0.96	0.92	0.90	0.88
LZM...2(-4)-A15...200	TM	1.04	1.02	1	0.98	0.96	0.95	0.94
LZM...2(-4)-A250	TM	1.04	1.02	1	0.98	0.96	0.95	0.94
LZM...3(-4)-A250...500	TM	11.12	1.06	1	0.94	0.88	0.85	0.82

Notes With temperatures which deviate from the reference temperature, a slight change of the overload protection properties occurs. In order to determine the release time using the tripping characteristics the temperature compensation coefficient in accordance with the table must be considered.
 Example: An LZM1-A100 is calibrated for a reference temperature of 40 °C.
 What happens when it is operated at an ambient temperature of 60 °C ?
 At 60 °C, the temperature compensation coefficient of 0.86 results in a reduced operating current of $I_r = 100 \text{ A} \times 0.86 = 86 \text{ A}$.
 In other words at an ambient temperature of 60 °C the LZM1-A100 trips as if it were set to 86 A.

Device Type	Release Type	Reduction of the rated operational current (derating) under particular ambient conditions (according to IEC 947)						
		Derating coefficient						
		20 °C	30 °C	40 °C	50 °C	60 °C	65 °C	70 °C
Thermomagnetic release (TM)								
System protection		Protection of systems (reference temperature 40 °C)						
LZM...1(-4)-A15...80	TM	1	1	1	1	1	1	1
LZM...1(-4)-A90...125	TM	1	1	1	1	0.86	0.83	0.80
LZM...1(-4)-A160	TM	1	1	1	0.95	0.90	0.85	0.80
LZM...2(-4)-A15...200	TM	1	1	1	1	1	1	1
LZM...2(-4)-A250	TM	1	1	1	1	0.90	0.85	0.80
LZM...3(-4)-A250...500	TM	1	1	1	0.94	0.88	0.85	0.82
Electronic release (E)								
System protection								
LZM...3(-4)-AE630	E	1	1	1	1	0.90	0.85	0.80
LZM...4(-4)-AE800...1000	E	1	1	1	1	1	1	1

Notes The derating coefficient must be considered in accordance with the following table in order to determine the maximum permissible current loading at different ambient temperatures.
 Example: An LZM2-A250 should be operated at an ambient temperature of 65 °C.
 How high is the permissible rated operational current I_e ?
 At 65 °C the derating coefficient is 0.85, this means $I_e = 250 \text{ A} \times 0.85 = 212.5 \text{ A}$.
 The LZM2-A250 may be operated at an ambient temperature of 65 °C with a maximum $I_e = 212.5 \text{ A}$.

Notes

The values stated in the table apply for 3- and 4-pole fixed mounted devices with an equal load distribution.
 On 4-pole devices the current in the N-conductor is equal to zero.
 The total resistive load is the measured value for a 3-pole or a 4-pole switch.
 The total heat dissipation is the value measured at I_n , 50/60Hz for a 3-pole or 4-pole switch.
 The heat dissipation can be calculated with the formula: $P = 3 \times R \times I^2$

LZM up to 1000 A with electronic release (3- and 4-pole)

LZM3	LZM4
R	R
[μ Ohm]	[μ Ohm]
100	37

Notes

The values stated in the table apply for 3- and 4-pole devices with an equal load distribution.
 On 4-pole devices the current in the N-conductor is equal to zero.
 The total resistive load is the measured value for a 3-pole or a 4-pole switch (independent of I_n and the type of release).
 The heat dissipation can be calculated with the formula: $P = 3 \times R \times I^2$
